

Value Engineered Collectors

For Optimal Performance and Longevity

Vacuum Tube Collector VTN Series

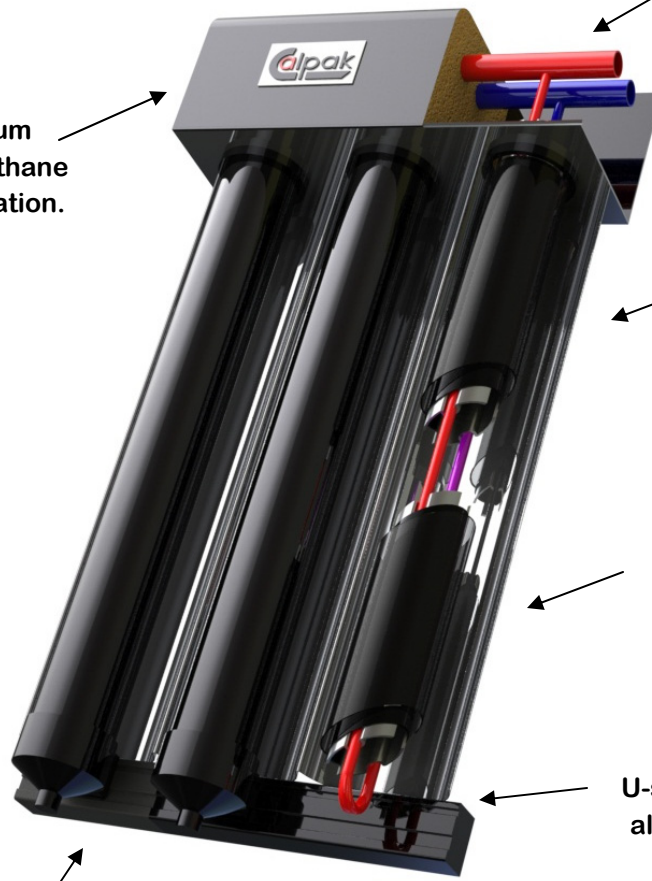

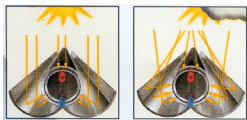

Anodized Aluminum header with polyurethane and fiberglass insulation.

The collector U-bend copper tubing is brazed to the inlet and outlet manifolds for high pressure use.

Double walled evacuated tube allows radiant energy to enter while insulating against thermal losses.

Highly selective coating on inner section of glass tube maximizes absorption while minimizing radiant heat loss.

U-shaped copper tube with inner aluminum fins for heat transfer.

Compound Parabolic Collector (CPC) optimizes performance even on cloudy days.
